

MATERIAL DATA SHEET

Max H-Pur

GENERAL INFORMATION

Max H-Pur is a specially developed polyurethane system, scientifically formulated from a selection of high-quality chemical components to meet the increasing technical demands in the sealing industry.

It has been optimised in terms of its mechanical and tribological properties, resistance to chemicals and hydrolysis and high temperature stability (+ 150°C). It has high tensile strength, very high wear resistance, low hysteresis, good flexibility at low temperatures (-25 °C) and a low compression-set.

Special polymeric lubricants added to the formula ensure superior sliding properties (self-lubrication), significantly reduce friction ($\mu < 0.2$) and prevent the stick-slip effect, thereby exceeding the performance of polyurethanes filled with solid lubricants (MoS₂).

Max H-Pur shows excellent performance in oil hydraulic applications, in sub-sea and natural water applications at elevated temperatures, in cleaning processes in the food/beverage industry, in sour oils and gases in O&G industry, in flame retardant hydraulic fluids (HFA- HFB fluids in mining cylinders and hydr. presses), as well as in biological degradable fluids (vegetable oils and synthetic esters).

It is made available in different colors - red, green, blue, turquoise, natural and dark grey – commonly used in the lathe-cut sealing industry.

Max H-Pur in red, blue and natural colour comply with the FDA CFR 177.2600 food standard.

REMARK

All test methods and values stated above are corresponding to ASTM | DIN | ISO standards and have been tested on standardized plates in the laboratory. All tests are made under laboratory conditions.

This information does not except our customers to test our products for its suitability for the intended application.

Utilization, processing and application of our products are out of our control and therefore our customers responsibility, also in terms of any protective rights of any third party.

MATERIAL DATA SHEET

Max XH-Pur

GENERAL INFORMATION

Max XH-Pur is a specially developed polyurethane system, scientifically formulated from a selection of high-quality chemical components to meet the increasing technical demands in the sealing industry.

It has been optimised in terms of its mechanical and tribological properties, resistance to chemicals and hydrolysis and high temperature stability (+ 150°C). It has high tensile strength, very high wear resistance, low hysteresis, good flexibility at low temperatures (-25 °C) and a low compression-set.

Special polymeric lubricants added to the formula ensure superior sliding properties (self-lubrication), significantly reduce friction ($\mu < 0.2$) and prevent the stick-slip effect, thereby exceeding the performance of polyurethanes filled with solid lubricants (MoS₂).

Max XH-Pur shows excellent performance in oil hydraulic applications, in sub-sea and natural water applications at elevated temperatures, in cleaning processes in the food/beverage industry, in sour oils and gases in O&G industry, in flame retardant hydraulic fluids (HFA- HFB fluids in mining cylinders and hydr. presses), as well as in biological degradable fluids (vegetable oils and synthetic esters).

It is made available in different colors - yellow and dark grey – commonly used in the lathe-cut sealing industry.

Due to its excellent extrusion resistance, allowing larger sealing gaps at higher application temperatures, superior sliding properties and reduced stick-slip it is mainly used for elastomer energized composite seals.

MATERIAL DATA SHEET

XSH-Pur

GENERAL INFORMATION

XSH-Pur is a hard grade casted polyurethane system (CPU), made of a selection of top-grade chemical components which have been scientifically blended for the use in the sealing industry.

XSH-Pur has been optimized regarding its hydrolysis stability, high temp. stability, mechanical properties and friction and wear by adding solid lubricants (MoS₂).

Besides an outstanding stability in oil hydraulic applications XSH-Pur is highly recommended to be used in high temp. natural and/or sea-water applications, in sour oils and gases, for the use in flame retardant hydraulic fluids (HFA- HFB fluids in mining cylinders and hydr. presses), as well as in biological degradable fluids (vegetable oils and synthetic esters).

Due to its excellent extrusion resistance, allowing larger sealing gaps at higher application temperatures, improved sliding properties and reduced stick-slip effect it is mainly used for composite seals.

MATERIAL DATA SHEET

NBR

GENERAL INFORMATION

NBR is an acrylonitrile-butadiene rubber commonly known as Nitrile or BUNA. It has good mechanical properties and chemical resistance to mineral oils and greases, HFA, HFB and HFC fire retardant pressure fluids.

NBR is one of the most used elastomers in the sealing industry.

MATERIAL DATA SHEET

FKM | FDA

GENERAL INFORMATION

FKM | FDA is an elastomer based on fluoro-rubber and commonly known as FPM, VITON®. It has outstanding properties in resistance to high temperature, weathering, ozone and many chemicals. FKM | FDA has good chemical resistance to mineral oils and greases containing sulphur, HFD fluids, crude oil and sour gas but is not resistant to anhydrous ammonia, amines, ketones, esters, hot water and low-molecular organic acids. FKM | FDA corresponds to foodgrade standards.

MATERIAL DATA SHEET

EPDM | FDA

GENERAL INFORMATION

EPDM | FDA is based on ethylene-propylene rubber and is commonly known as EPDM.

It has outstanding resistance to hot water, steam (up to 180 °C), washing agents and polar organic solvents and good resistance to weathering, ozone and ageing. EPDM | FDA is not resistant to mineral, vegetable and animal oils, resistance to gas permeability and radiation is low.

EPDM | FDA can be used in glycol based break fluids, provided previous successful tests passed.

EPDM | FDA corresponds to foodgrade standards.

MATERIAL DATA SHEET

MVQ | FDA

GENERAL INFORMATION

MVQ | FDA is a methyl vinyl silicone rubber commonly known as Silicone.

It has poor mechanical properties and is therefore mainly used in static applications. It is highly resistant to weathering, ozone and ageing and is used for applications in contact with foodstuff, hot air and mineral oils.

MVQ | FDA has a high gas permeability.

MVQ | FDA corresponds to foodgrade standards.

MATERIAL DATA SHEET

PA6 | FDA

GENERAL INFORMATION

PA6 | FDA is a casted high molecular and high crystalline polyamide, commonly known as Nylon or Polyamide. PA6 | FDA is one of the most important engineering plastics with excellent mechanical properties, low stress, low coefficient of friction and good abrasion resistance. PA6 | FDA is mainly used in mineral oils and is suitable for applications in contact with foodstuff. PA6 | FDA is optimized in regards to moisture absorption (leads to swelling and the loss of physical properties for normal PA), and maintains stable mechanical properties.

PA6 | FDA is approved and corresponds to foodgrade standards.

SPRING DATA SHEET

V-Spring

Material: X12 Cr Ni 17 7

Material number: 1.4310; AISI 301

Standard dimensions [mm]

Partnumber	a	b	c1	d	e	f	g	R
52V1000120008	1.2	1.3	0.08	2.9	0.5	0.5	0.3	0.3
52V1000190010	1.9	2	0.1	4.5	0.6	0.75	0.3	0.4
52V1000200012	2.0	2	0.12	4.5	0.6	0.75	0.3	0.4
52V1000280012	2.8	2.8	0.12	6.35	1.2	1	0.3	0.8
52V1000280015	2.8	2.8	0.15	6.35	1.2	1	0.3	0.8
52V1000450015	4.5	4.5	0.15	9.8	1.4	1.4	0.5	1
52V1000450020	4.5	4.3	0.20	9.8	1.4	1.4	0.5	1.4

52V1001250050	12.5	11.5	0.5	27.5	3.3	3	1	2.85

Material data X12 Cr Ni 17 7

General properties

- high tensile strength
- good corrosion resistance
- minor relaxation

Chemical composition [%]

C	Si	Mn	P	S	Cr	Mo	Ni
max. 0.12	max. 1.5	max. 2	max. 0.045	max. 0.015	16 – 18	max. 0.80	6 – 9

Mechanical properties

Tensile modulus E [N/mm ²]	E=190000 N/mm ²
Tensile strength R _m [N/mm ²]	R _m =1600 N/mm ²
Torsion modulus G [N/mm ²]	G=71500 N/mm ²
Permissible torsional strength τ_{zul} [N/mm ²]	τ_{zul} =720 N/mm ²
Temperature range T [°C]	T= -200 up to +250 °C
Density γ [kg/dm ³]	γ =7.9 kg/dm ³
